"A book in the hand is worth ten on the shelf;
You make what you read in it part of yourself."
--Ann Wakely Jackson.

BOOKS RECENTLY RECEIVED

TRAINING EMPLOYEES, by George D. Halsey. Harper, 1949. 263p. 249.3 H16T

"This book is intended primarily as a handbook for everyday use by those executives in factories, stores, and offices who are directly responsible for training employees. It is intended both for the operating executive who wants to do a better job of training the employees directly under his supervision and for the staff executive whose function is to plan and co-ordinate training throughout the organization. With this use in mind, theoretical discussion has been reduced to a minimum, and as full detail as space will permit is given to descriptions of how training is being done in actual situations in various types of businesses." From the Preface.

WATER AND MAN: A STUDY IN ECOLOGY, compiled and edited by Jonathan Forman and O. E. Fink. Friends of the Land, 1950. 407p.

This is the record of what was said when nearly a score of top-flight authorities on the subject of water and its relation to man's life and work were brought from all parts of the country by Friends of the Land to address their Eighth Annual Conference on Conservation, Nutrition and Health. In 28 chapters, annotated by Jonathan Forman and with the addition of essays the editors believed pertinent, water is brought into focus. The papers deal with watershed management, city and country water supplies, drainage and irrigation projects, the future of rivers and harbors, power developments and human culture.

THE WESTERN RANGE LIVESTOCK INDUSTRY, by Marion Clawson. McGraw-Hill, 1950. 401p. 40 C57

"The objective of this distinctive new book is to analyze and describe the range livestock industry from an economic viewpoint. The author draws upon his 20 years of professional work and 40 years of living in the range livestock region in considering the following points: the physical environment upon which the industry is closely dependent, the ownership and management of the extensive areas of land which the industry uses, the economic problems of ranch organization and operation, credit for the industry, and the factors affecting demand for, and supply of, range livestock products." From book jacket.
